

A

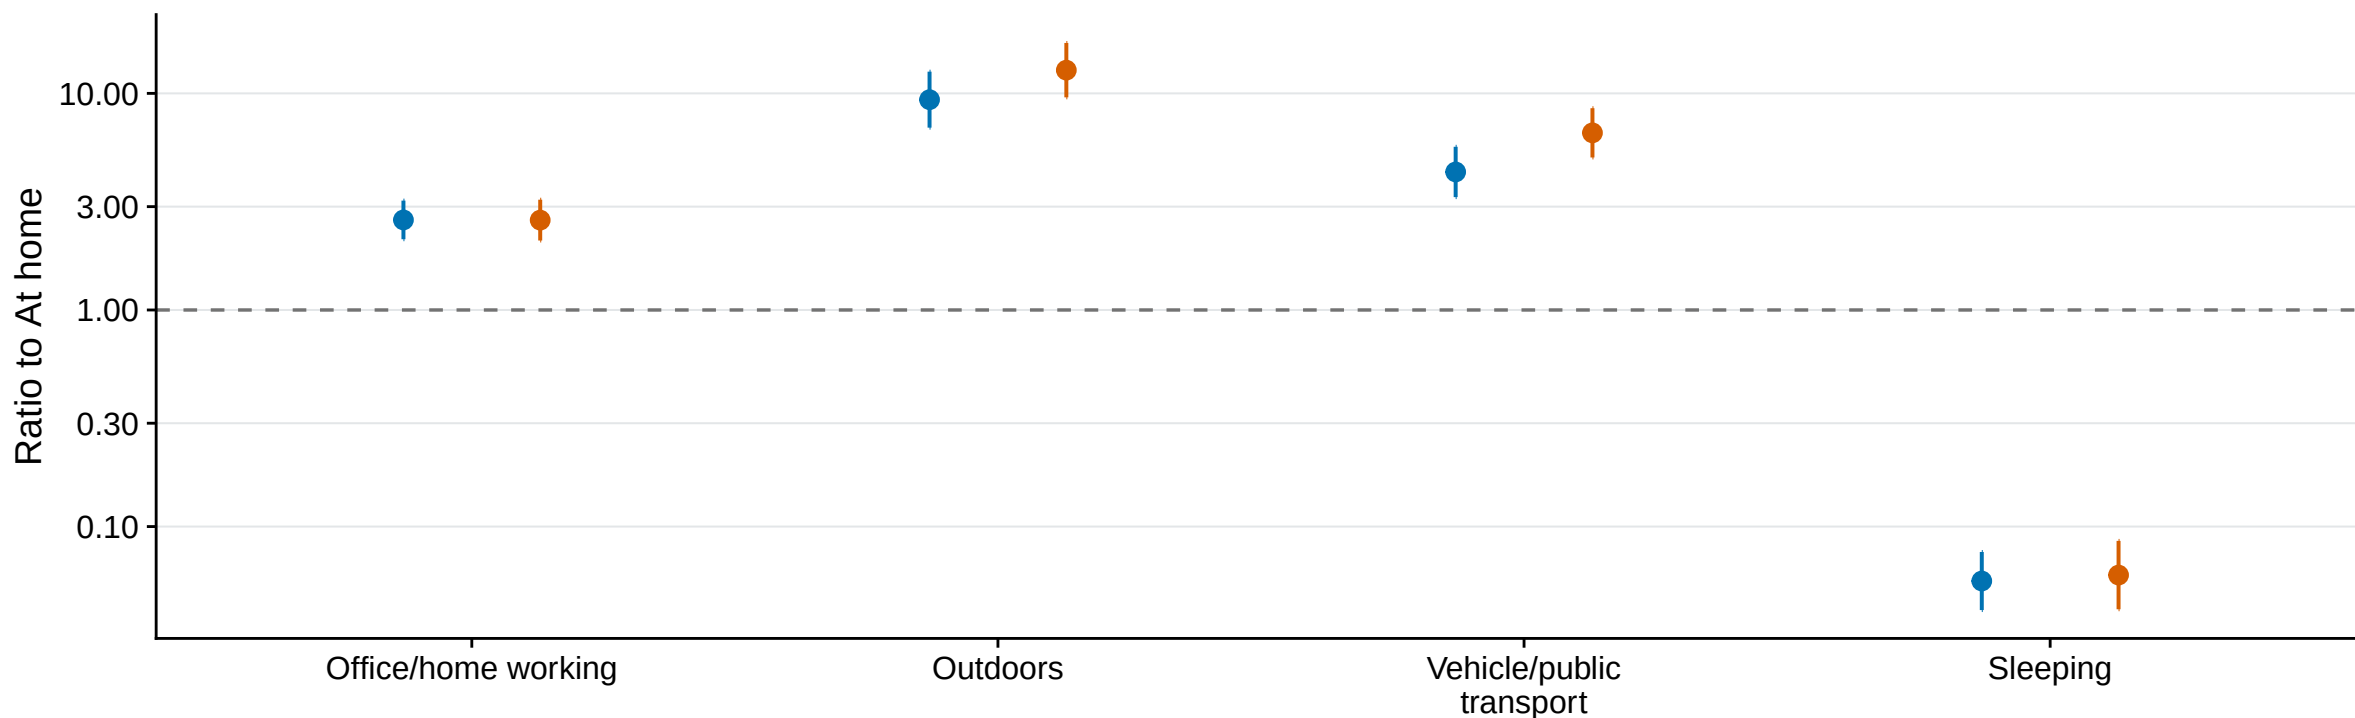

Heterogeneity-model standardized one-hour meEDI

● Named category ○ Other Placement Near-eye Chest

B

Activity-by-site ratios versus At home

Points and bars are estimates and participant-cluster-robust 95% confidence intervals.

Sites receive equal weight on the fitted log-mean scale.

The five named categories come from the activity-by-site interaction model. Other is an additive-model display-only estimate.

The meEDI transformation is display-only.
